

## Study Title: Community Oral Health Transformation (COOrHT) Initiative

### Privacy Concerns

This study would like your opinions as a patient or dental provider who may have received or provided dental care that included teledentistry, minimally invasive care, or personalized care.

Your personal information and individual responses will be kept private.

Interview recordings will be saved using a Unique Identification Number. Only research team members have the number and could match it to your information. Your interview process, recording, and transcribing will be done in a way that is ethical and meets research guidelines that are approved by an Internal Review Board.

Transcripts will be kept in a secure location at CareQuest Institute for Oral Health. Digital recordings will be deleted once transcriptions are reviewed by the study team. Digital transcripts will be kept in a secure location for at least six years. This is common practice in qualitative studies.

Your data will be private and protected in all products that result from this study. Examples of products include publications or presentations. Any comments used from the interview will be quoted as a patient, caregiver of a patient, or provider along with a general description of the context.

To further protect your privacy, your dental clinic will not have access to the interview recordings or transcripts.

If you have any questions, concerns, or complaints about this study now or in the future, please contact Kelly Schroeder, email [KSchroeder@Carequest.org](mailto:KSchroeder@Carequest.org).
